The Challenge:

Diamond Airport Hotels were looking for a lift to move materials in and out of a building. They wanted something that could hit every floor and make loading materials into the building more efficient.

The Solution:

*Goldsmith Consulting Design contacted **Chinook Scaffold Ltd** and asked us about our **Fraco ACT-8 Mast climber**.*

The Service:

We provided them with a deck that is 12 ft long and 9 ft wide to accommodate their plumbing materials and drywall. The machine will later be used to move furniture and supplies into the building during the finishing stages of the project. We have increased the production of the project by making every floor easily accessible for all trades onsite. Trades are able to pull up to the mast climber and load materials or have a zoom boom load materials onto the deck as well. We have a great working relationship with Goldsmith Consulting Design who were very happy with the product and the result. We look forward to using our mast climbers on Hotels and apartments in western Canada.
